# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

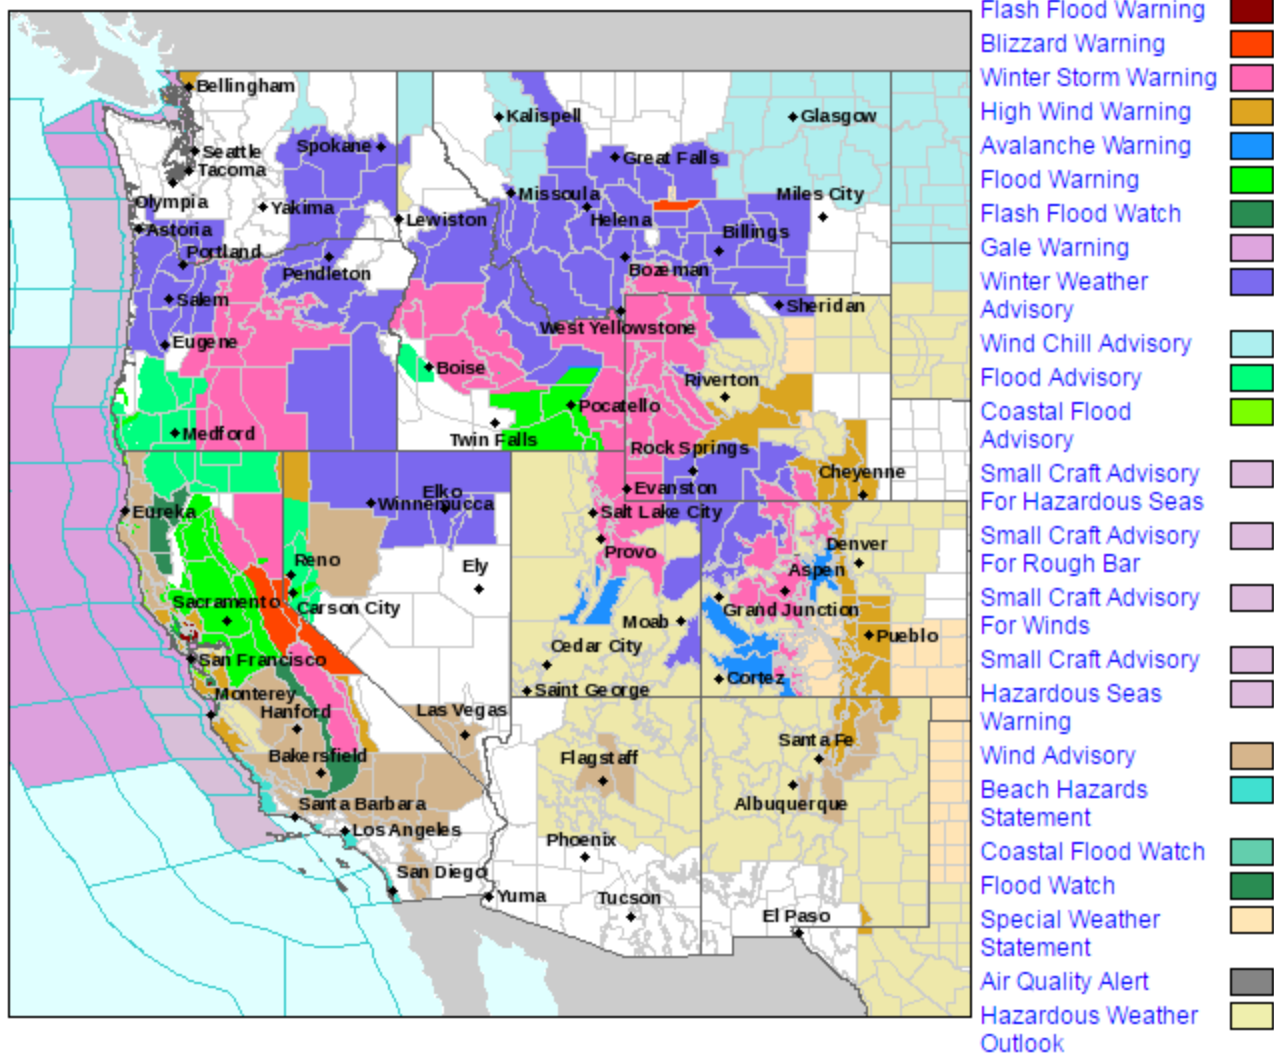

Very windy, wet weather will be over the region today. Gusty southerly winds will be on the increase with many areas having a period of sustained wind speeds of 15-30 mph and gusts 40-55 mph rather common. Water courses will run high and some flooding is anticipated. Saturated soils and the strong winds may well blow down some trees as well. Snow levels will be 3000-4000 feet in the north and 4500-5500 feet in the south. Precipitation will continue well into Thursday, although it will generally become more showery starting later tonight. Snow levels Wednesday will vary from 2000-3000 feet in the north and 3500-4500 feet in the south. Mountain travel may become a little easier Wednesday, but will still be challenging. The gusty southerly winds will continue over the eastern half of the region overnight, but they will be decreasing to mostly 10-20 mph with gusts to around 30 mph. Dry weather is expected Friday through Monday as high pressure moves over the region. Periods of overnight and morning valley fog may develop and persist, but some light northerly winds may also develop in the northern Sacramento Valley in particular and would keep that area somewhat fog-free. Another major, wet weather system may move into the region starting late next Tuesday and last a couple of days.

## **SOUTHERN CALIFORNIA**

A very wet, windy weather system will be over the region today with locally heavy rain or snow persisting for some time. Mountain travel will be difficult for much of the day, and snow levels will mostly be 3000-5000 feet in the north and 4500-5500 feet in the south. Southerly winds will be on the increase this morning and a period of sustained speeds of 15-30 mph and gusts 45-55 mph is expected for many areas. Wet weather will continue into Thursday, but it will become lighter and generally more showery overnight. Snow levels Wednesday will drop to around 2000-3000 feet in the north and 3500-4500 in the south. The gusty southerly winds will decrease quite a bit over the eastern half of the North Ops region tonight, but they will still be gusting to 25-30 mph in a lot of places into early Wednesday before decreasing during the day. High-running water courses will be common with areas of flooding expected over the next few days. The soft, saturated soils and strong wind will also create ideal conditions to topple trees. Friday through the weekend will be dry and warmer as high pressure moves through the region. Valley fog will become possible, but where it forms may well depend on whether some light northerly winds develop. Next week another significantly wet weather system may move into the region starting late next Tuesday.
